My name is Negasi Abebe I am experienced in Data Driven Decisions (DDDs) and understand the ways to analyze data, draw statistical conclusions, analyze distributions, test engineering hypotheses, perform capability studies, and design of experiments.

I have excellent knowledge and skill on performing and analyzing data using Independent T test, paired T- test and ANOVA depending on the nature and type of given data in Minitab.

I did several real times projects and gained practical knowledge and skill in Permission and PERSIMMON & HELOIS ASQ ENGINEERING SOLUTIONS (based in Florida USA) both as an employee(remote) and Certified Quality Engineer Trainee.

I Can define Factors, Treatments and Levels for constructing Design of Experiments (DOEs)

and can interpret the result for process or product improvement.

I Can assign design specifications and optimize the specifications using the adequate implementation and testing of Design of Experiments, I can also conduct robust Process Capability Analysis for both normal and nonnormal data and able to interpret the Cpk and Ppk indexes for process characterization.

I feel, I can full fit for the position, and we can discuss for further details

With Kind Regards
Negasi Abebe
